DISINFECTING COVID-19 IN FACILITIES WITH TOUCH-FREE CLEANING

Comes Complete with Standard Tools
Needed for Touch-Free Cleaning

COVID-19 is here and it has never been more important to deep clean and disinfect surfaces in your facilities that potentially contain the virus.

The TRS provides a touch-free cleaning system that allows the operator the ability to effectively apply disinfecting cleaning chemical to surfaces, effectively rinse those surfaces down and remove the waste into a contained recovery tank without touching these surfaces with your hands.

VERY IMPORTANT! Read and abide by all of the chemical manufacturer's specifications according to dilution, use, application and dwell time. Proper use of the chemical is important for the disinfecting process.
